ACP TODAY

Issue #8

Latest news and bulletin updates

What's been going on in April

True to the old saying, April has been full of showers and it's also been time for a spring clean.

The team have overhauled the organisation of the workshops, in order to streamline production, and to help us to make your orders more efficiently. Production was halted for a day, to allow for the work to take place.

Mid reorganisation – a virtually empty workshop!

Get your Concrete Posts and Gravel Boards at 2022 prices!

Not an aero bar in site with our posts! All made by hand, wet cast and vibrated.

We sell H Posts, End Posts and Corners, from 5ft to 12ft. Standard size is 100mm x 100mm. Larger posts are 100mm x 125mm.

Our Smooth Gravel Boards are 1830mm long, in heights of 150mm, 225mm and 305mm. Our Rockface Gravel Boards are 1830mm x 305mm.

All About Coping Stones

Here at Attlebridge Concrete & Porcelain, there aren't many days when we're not making coping stones. We make them in 4 different styles for walls, and also make standard and bespoke copings for parapet roofs.

What's the function of a coping stone?

Apart from finishing off your building project aesthetically, a coping stone performs an important function. They are crucial in preventing rain from seeping through the wall. They include drip checks that help keep water away from the walls and prevent walls from weather damage.

What does OWTT and TWTT mean?

On our price lists you'll see the abbreviations OWTT and TWTT. OWTT stands for Once Weathered. These copings are designed to guide water in one direction. TWTT stands for Twice Weathered. These copings can also be called 'saddle-shaped'. They are inclined on both sides.

Why use a Flat Coping?

You may choose to use a flat style coping. These are the perfect choice on a wall where railings will be installed; for seating; or a more modern look.

Other Styles

As well as Once Weathered, Twice Weathered, and Flat Copings, we also make an Architectural Coping. These are in a twice weathered style, but are more decorative, with fluting at the bottom. Parapet Copings are made to put on the parapet wall of buildings. Again, their purpose is to provide a decorative finish and weather protection.

We are always happy to take to you about your requirements for copings. We offer a standard range, and can also make bespoke copings to match your exact specifications!

Bespoke Flat Copings
