

What's been going on in March

As we go to press, the Team are busy preparing for the Easter break; ensuring all jobs are on schedule.

March has seen us come to the end of our project for Houghton Hall.

We have made a total of 123 plinths, which have all made their way to the Hall to be installed.

Once the installation has been completed and the exhibition has been opened, we will share pictures with you.

We're also delighted to have started providing cills for another Lovell's site in Hunstanton.

Finally, we'd all like to wish you a Happy Easter.

Why Seal Your Concrete?

As spring approaches, you may be thinking about laying new patios or cleaning existing ones in preparation for the summer. One of the important jobs to do is to seal or reapply a sealant to your concrete patios, or other concrete items.

Applying a sealant will create a hydrophobic water barrier which will cause water or other liquids to turn into droplets on the surface. The water can then quickly dry or run off the slab instead of soaking into the pores.

The main benefits of sealing your concrete are:

Increasing Durability

Inhibiting Mould Growth

Adding Damage Protection

Enhancing Appearance

Increasing Longevity

We would always recommend sealing your new concrete products after installation. It's important, however, to allow any mortar or grout time to dry before sealing.

Once sealed, your concrete is protected again for the year. A crucial part of your outdoor landscaping regime.

A Quick Turn Around for Porcelain

If you need your porcelain in a hurry, we can always help. The majority of the porcelain we offer is kept at warehouses in Tilbury Docks or Felixstowe. If the porcelain you have chosen is in stock, we can get it to you within 48 hours of ordering - there's no need for lengthy waits for delivery.

Our most recent order was placed on Tuesday, 26th March and will be delivered on Thursday, 28th March - just in time for our client to install during the Easter break!!!
