

What's been going on in August

August started off as a booming month - quite literally!

On the 8th August, in the middle of the day, our team heard a series of loud booms and felt the building shake.

It wasn't until later on in the day, that the source of this was revealed.

In the neighbouring village of Lendwade, a local landowner had discovered a large amount of World War Two ammunition.

The Army's Explosive Ordnance Disposal team had been called in and had in fact carried out a series of controlled explosions!

The rest of the month has been relatively quiet in comparison.

Colouring Concrete

When we think of concrete, we tend to imagine a dull, grey colour. Not much to look at and industrial. Sometimes, this is perfect for your project, sometimes not.

Here we use highly pigmented dyes to colour our concrete to offer you a range of options to suit your requirements.

The powdered dyes are added to the cement during the mixing process. Each colour has a recipe to ensure the end result is as consistent as possible.

Colours that we offer are: Raven, Charcoal, Portland, Limestone White, Bathstone Buff, Bracken and Terracotta.

The above copings are Raven and the copings and pier caps to the right are Bathstone Buff. These are currently our two most popular colours.

Bespoke Swimming Pool Copings

We were commissioned by Baroness Rawlings to make copings to go around her swimming pool. We worked closely with Baroness Rawlings and her landscaper to design the copings, and then it was over to our mould makers to produce a mould. It was a lengthy casting process, but as you can see, the results were worth the wait. We're also pleased to say that Baroness Rawlings was thrilled with the results.
