

What's been going on in April

We're on full spring clean mode this month. As you can imagine, making concrete is not a clean process, and creates a lot of mess.

Key areas of the yard are being pressure washed and all workshops are being tidied and cleaned.

This job is not being made easier by nesting Jackdaws. Everyday, new twigs and nesting materials are being found in various areas of the workshops. One of the hazards of working in an old barn!

Managing Our Waste

Taking care of our environment at ACP is an important issue, and where possible we try and mitigate the impacts our business has.

In the office, we use recycled paper, and we also recycle as much paper and cardboard as possible. Our printer cartridges are also recycled.

We would love to become as close to paperless as possible, and are making steps in this direction.

Within our production process, our waste is closely monitored. We record wastage figures every day, and always try to limit these numbers as much as possible.

All unused and obsolete steel is recycled with EMR Group, locally in Lenwade. Our solid concrete waste goes away to be crushed and reused through Raymond McLeod Farms Ltd, while our general waste is taken away by Norman Wenn Waste Management. 99% of this general waste will be diverted from landfill. Any chemical waste that we may have is dealt with by certified waste disposal firm, Ellaway Environmental Ltd.

We continue to look at ways to improve our waste management and keep our company as green as possible.

Sizewell C

We've been invited to complete EDFs PQQ (Pre-Qualification Questionnaire) to become an 'Approved Supplier' for the Sizewell C project, if successful this offers ACP a great opportunity and we look forward to potential projects.
