

Quick News Update

The Summer is nearly over, and the last two months have flown by.

The Office Team have been audited, and passed with flying colours!

Outside, the Production Team have been busy undergoing their annual yard and workshop maintenance.

Alongside this, we've been busy with all our ongoing jobs.

Bespoke Work

Here at ACP, amongst our day to day work, we also specialise in making bespoke precast concrete.

Commissions we have worked on include decorative wall plaques; bespoke surrounds for ponds and swimming pools; a cross for the outside of a chapel; plinths to support sculptures; restoration on period properties; and many more.

If you have any projects in mind, feel free to contact us and we will work with you to discuss your requirements. As long as you have your design, we can work with you to manufacture the required casting moulds and then bring your project to life!

Spotlight on James

James is our Mould Maker at ACP and we've taken time to touch base with him about his role here.

How long have you been making moulds?

Despite being at ACP for over 20 years, I have only been making moulds for the past 7 years. I was always interested in the process, and it wasn't until then that I had the opportunity to get involved.

How did you start out at ACP?

I started out at ACP as a general labourer straight out of school. Since then, I have worked my way up to my current role. I feel that starting where I did has helped me gain a lot of knowledge about concrete and it's quirks; and I've gained invaluable experience along the way.

What do you like best about your role?

I do really like working on bespoke moulds for clients. Sometimes these can present a challenge and you have to find creative ways to overcome them. It's always nice to do something outside the norm. I also have a great team to work with - that always helps!

Do you have a favourite job that you've worked on?

I've had a lot of jobs that I've enjoyed working on. Just recently, a favourite has been making some industrial style lamps. I'm now just waiting for my next challenging project!!
